

ABSTRACT OF THE DISCLOSURE

5 An apparatus, such as spring scale, including graduations for percentages of line test values (e.g., 25% and 33%) for a plurality fishing line tests for use with a fishing rod/reel in order to set the reel drag without the need to conduct any calculations. An electronically-operated scale for use with a fishing rod/reel that displays the line test value whenever percentages (e.g., 25% or 33%) of that line test value is reached during reel drag setting, thereby also avoiding the need to conduct any calculations.
